JOIN INTEL, ONETRUST AND CDW FOR OUR EXCLUSIVE PREPARING FOR THE FUTURE OF GDPR SEMINAR AT OXO2

On May 25th 2018 we will see the activation of the greatest change to Data Privacy since the mid 90's across the EU. As a result the General Data Protection Regulation will have a profound effect on companies, their partners and how they need to respond to ensure compliancy whilst meeting customer expectations.

Intel, OneTrust and CDW invite you to join us at the OXO2 for a seminar to hear about the dynamics we face in today's evolving industry and how we can continue to deliver on customer expectations with greater data and infrastructure security.

Guest Speaker: Richard Curran, Chief Security Officer, Intel Corporation

Topics of discussion include:

- Security challenges facing the industry today and tomorrow.
- GDPR 101: Getting the basics right.
- Turning Security into a competitive opportunity.
- What are the key components to achieving GDPR compliance.
- The need to work with the right CSP.
- High level overview of what technologies and platforms are available today.

Join us on Tuesday 26th September at OXO2 in the OXO Tower, to learn how Intel, OneTrust and CDW can help your organisation prepare for the future with GDPR.

To confirm your place, please contact your CDW Account Manager or click the button below to register online.
