

MANAGE AND SECURE YOUR MOBILE ESTATE WITH APPLE AND CDW

Managing a mobile estate is a complex task for any organisation. By empowering employees with anytime, anywhere access to valuable company data and applications, it creates a risk of exposure to potential security threats. Having an effective and secure mobility strategy in place is vital for IT departments, in order to ensure crucial data is kept secure whilst still allowing employees to remain productive.

Managing Your Mobile Environment

The key to a successful mobility strategy is balancing IT control with keeping employees enabled with the best tools to do their job.

CDW empowers organisations with transformational technology solutions that are robust and secure whilst supporting the setup and management of a mobile workforce that expects to work productively.

As an Apple Authorised Reseller, our highly skilled Solutions Architect Team have the knowledge and expertise to help customers manage and secure their Apple device fleet throughout its lifecycle offering guidance and the tools needed in order to keep control.

Mobile Device Management

Setting up and deploying Apple technology has never been easier. With a complete set of tools from Apple and CDW's Mobile Device Management solution, organisations can easily deploy devices and content at scale.

Mobile Device Management solutions allow the IT department to configure and manage devices and wirelessly manage content without compromising employee productivity or privacy at the same time.

CDW has been supporting customers with a wide range of mobility solutions for many years, our highly certified Solutions Architects bring the knowledge and experience needed to deploy and manage every aspect of a mobile estate whilst also leveraging the expertise of Apple professionals through our Apple Authorised Reseller status.

Device Enrolment Programme (DEP)

Apple makes it easy to mass-deploy devices and distribute content to employees.

The Apple Device Enrolment Programme (DEP) simplifies the deployment process, providing a streamlined, efficient way of rolling out all devices automatically, removing the headache of manual configuration for IT.

As an Apple Authorised Reseller, CDW is approved to enrol all Apple devices into the Device Enrolment Programme. We also have the ability to enrol existing devices into the Device Enrolment Programme, allowing organisations to take full advantage of its benefits across their entire Apple deployment.

Volume Purchase Programme (VPP)

The Apple Volume Purchase Programme (VPP) makes it easy for IT to locate, purchase and distribute the content your organisation needs regardless of the quantity required.

This device based deployment of applications offers advantages in simplifying the deployment process for Apple devices as you can still provision managed applications regardless of whether the user has configured an Apple ID on the device or not.

By making use of the DEP you can also simplify the deployment of iPhones. Devices can be issued straight to the users rather than requiring intermediary steps by IT. This makes for a more efficient and simple process saving time and costs.

CDW provides support throughout the implementation process - from initial planning right through to deployment and device enrolment.

Why CDW?

CDW is an established and trusted IT Services and Solution Provider who has a long standing and successful relationship with Apple. We have a team of highly accredited experts who understand the Apple ecosystem and can offer in-depth knowledge and experience to help transform your organisation. It is our aim to work with you to achieve a secure environment that drives collaboration, providing users with a seamless and truly mobile working experience anytime, anywhere.

CDW also have the expertise to offer Mobility as a Service solution, providing customers with not only a fully managed resilient MDM environment, but also complimentary services such as Device Lifecycle Management, Breakfix Support, Helpdesk Services, Application Development and integration into existing backend infrastructure.
