Security, CDW
- 12.40 Safeguarding Your  
Organisation:  
Keynote Presentation including  
Phish Threat Demonstration –  
Richard Beckett, Sophos
- 13.30 3 Course Lunch in private  
dining room
- 15.50 Close

**91% of cyberattacks and their resulting data breaches now begin with a phishing email message. Appropriate user education and awareness training is critical to spot these types of emails, and understand what to do in the event of receiving one.**

Phishing and ransomware are big business. Attacks have shown record growth in recent years, with ransomware netting cyber criminals approximately \$1 billion in 2016, while the FBI estimates that in the two years following June 2016, BEC phishing attacks could cost businesses \$3.09 billion. Users continue to be the weak link in most organisations cyber security infrastructure, but an army of trained, phish-aware employees can provide your organisation with a human firewall against these threats.

Join CDW and Sophos for an interactive presentation to understand the different types of threats to your organisation and how to educate employees to identify and combat these attacks on your systems.

- **How do phishing scams work, and what's the worst that could happen?**
- **Educating the weak link**
- **The importance of multi-layered defence against phishing attacks**

We hope you'll be able to stay for an incredible 3 course networking lunch in the stunning Coral Reef Room, home to some of the world's largest coral reef tanks.

Places are limited. Please [click here](#) to register or contact your CDW Account Manager for further information.
